

University of New Hampshire – Manchester

Geometry and Measurements

July 1 2009 – June 30 2010

Summary of the project: The goals and objectives of LIME G&M are to prepare future leaders in New Hampshire mathematics education and build a teacher network through professional development. While increasing their content knowledge about mathematics, the participants will learn about professional mathematics organizations that can help them to become better mathematics teacher leaders and colleagues. The participants will increase their knowledge about geometry, measurement, and the NH Frameworks.

Two of the NHTM's Executive Board members, Roberta Kieronski, NHTM Past-President, and Betty Erickson, ATMNE Representative, will work with these teachers during the year. Involvement of classroom educators is crucial in assessment and curriculum development.
