Essential Questions for Nashua School District

1. What are the contributing factors to the achievement gap between students with disabilities and their non-disable peers, and how may this gap be narrowed?
2. What are the contributing factors to the achievement differential among other student demographic factors including poverty, first language (ELL), race/ethnicity and gender and how may this difference be narrowed?

Background and Overview

Nashua's approach to Focused Monitoring (FM) includes:

1. Expanding the FM essential question to include all students and all subgroups in the district, rather than just focusing on identified students
2. Viewing the FM process as an opportunity to improve and develop the district's systems and capacity for continuous improvement, rather than as a one-shot attempt.

Because of the size and complexity of the Nashua School District it was decided to focus on having the 12 elementary schools go through the FM process during the 2009-2010 school year with implementation of the resulting action plans and monitoring of the implementations in 2010-2011. The five secondary schools will go through the FM process and create their action plans in the 2010-2011 school year.

As part of the Nashua DINI plan developed each school developed a school data team that participated in a two-year professional development program facilitated by TERC (Technical Education Research Centers). The TERC data protocols were based on Nancy Love's "Using Data/Getting Results: A Practical Guide for School Improvement in Mathematics and Science". As a result, in most cases the FM process used this year was able to use and build upon existing school data team expertise and experience. In some cases the school-based work of the data teams had not been fully realized and FM was used as a mechanism to provide additional professional development to school data teams. The handout below was used to orient school data teams and explain how the FM work relates to the TERC protocols already in place.

Nashua School District Focused Monitoring Data Analysis Protocols: Improving Student Learning Through The Use Of Data**Background**

Focused Monitoring, as used in the Nashua School District, refers to the systemic process of:

- Analyzing students' learning and academic success/achievement in various areas of the curriculum
- Analyzing students' learning and academic success/achievement both in the aggregate and in a variety of student subgroups

- Identifying potential causes of “student learning problems” and the identification of a “root cause” (or causes) of the student learning problem
- Investigating and prioritizing potential solutions to the student learning problem(s)
- Developing an action plan to implement changes that address the student learning problem
- Implementing the action and evaluating its success at improving students’ learning and academic success in the targeted areas.

Root cause(s) is/are “the deepest underlying cause or causes that the school can control or impact that, if addressed, will cause a significant improvement in under-performing students on key student achievement indicators”.

To understand is to grasp meaning ... To grasp the meaning of a thing, event, or situation is to see it in its relations to other things: to note how it operates, what consequences follow from it, what causes it, what uses it can be put to... Things gain meaning when used as a means to bring about consequences... the relation of means to consequences is the center at the heart of all understanding. —John Dewey

The Role of Building Data Teams

The use of data to guide and inform school improvement is an exercise in inquiry. That inquiry seeks to understand, explain and respond to findings about student learning and achievement.

Inquiry is investigative, collaborative, and involves a set of principles and a dialogue. A dialogue is different from a discussion. In a discussion the intent is to make a decision—literally to “kill choice”. In a dialogue the intent is not to jump to a quick decision, but rather to seek shared meaning of a complex situation, such as student learning or achievement. That meaning then serves as the starting point for improving student learning.

Inquiry about student learning also relies heavily on the rigorous use of data. There are a variety of types of data, including:

- Aggregate data (data that represents the entire group)
- Disaggregated data (data that represents one or more subgroups)
- Content strand data (data about student results in a content strand)
- Individual item data (data from one assessment item, question or task)
- Individual student data.

“Dialogue comes from the Greek word dialogos. Logos means ‘the word,’ or in our case we would think of the ‘meaning of the word.’ And dia means ‘through’ - it doesn’t mean two. A dialogue can be among any number of people, not just two. Even one person can have a sense of dialogue within himself, if the spirit of dialogue is present.” —Bohm, 1996

“Data have NO meaning. They are simply data (Love, 2002).” What gives meaning to data are relevant comparisons. Typically, this involves comparing results of one group with those of another group, or comparing current results with prior results for the same group.

School improvement data is typically mapped to standards or outcomes—the desired outcomes of

teaching and learning. By mapping assessment results to standards those results can indicate progress, or lack of progress, towards the achievement of educational goals.

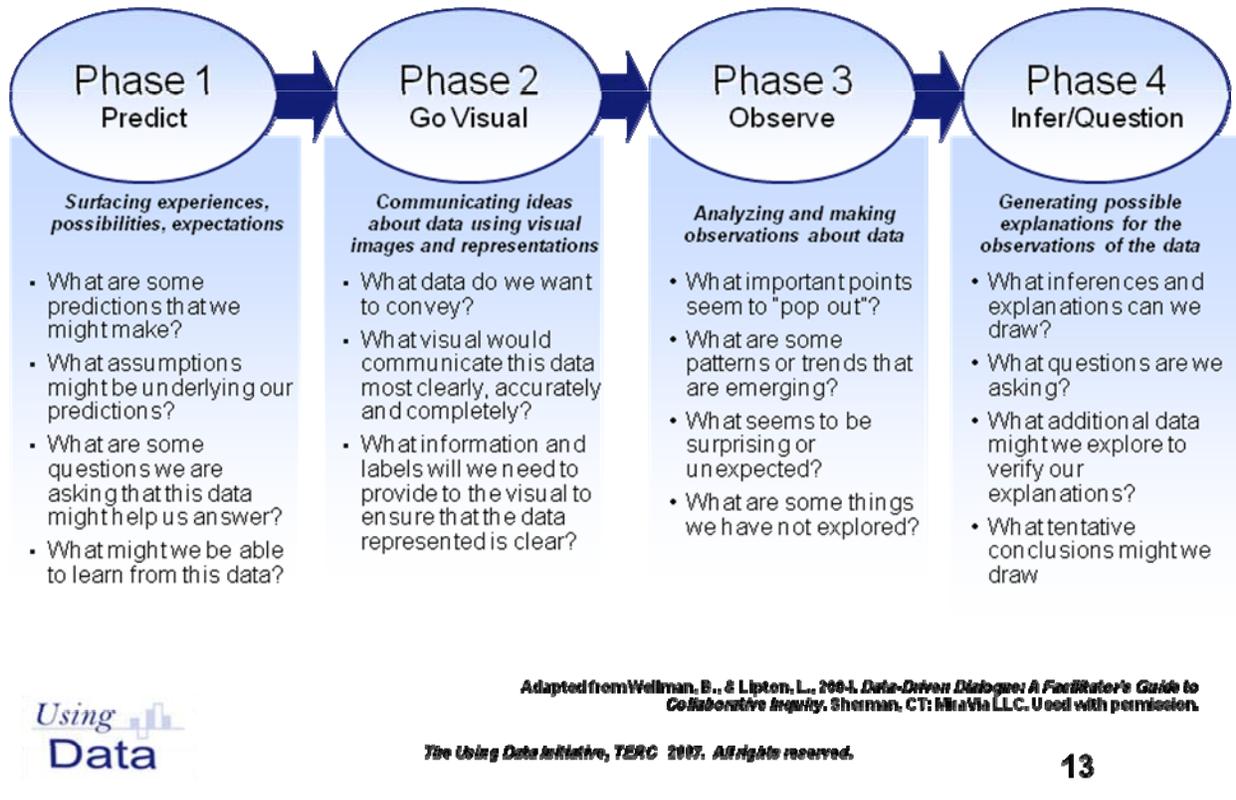

Norms of Collaborative Inquiry

1. Use multiple measures and multiple data sources where possible.
2. Separate fact from inference.
3. Pay attention to the process.
4. Emphasize both strengths and weaknesses.
5. Develop shared and common meaning.
6. Involve multiple voices and perspectives.
7. Keep the focus on improvement, not blame.
8. Provide adequate time for dialogue.
9. Don't use data to:
 - Punish (e.g., administrators, teachers, students, etc.),
 - Blame students or their circumstances
 - Jump to conclusions or quick fixes.

Inquiry Question Sequence (adapted from Love, 2002)

1. What are our academic strengths and weakness?
 - As measured by NECAP results as well as other academic indicators
2. To what extent do performance gaps exist among racial, gender, ability, special education, and SES groups in our school(s)?
 - This includes both current and historical data
3. To what extent do some students (poor, minority, English language learners, girls, etc.) have less opportunity to learn than others?
 - Including such factors as attendance, teacher qualifications, experience and/or effectiveness, class size, instructional time, etc.
4. To what extent do student aspirations and teacher expectations impact student learning and academic success?
5. How good is our written curriculum?
6. How well aligned are our core resources with the state standards and district educational goals?
7. How well aligned is our instruction with state standards and district educational goals?
8. How well is our assessment and evaluation aligned with state standards and district educational goals?
9. How well does our professional development support ongoing implementation of curriculum and instruction?

Data-Driven Dialogue

Focused Monitoring Structure: Leadership Team, School Achievement Teams, the Focused Monitoring Coordinator Position, and the Curriculum and Professional Development Council (CPDC)

Focused Monitoring Leadership Team (FMLT)

The FMLT consists of:

1. Dr. Eric Schroeder, Director of Special Education
2. Dr. Brian Cochrane, Director of Accountability and Assessment
3. Ron Boisvert (0.6 FTE) and Bill Pimley (0.2 FTE) who combine to fulfill the Focused Monitoring Coordinator position for the Nashua School District.

The FMLT:

- Coordinates the FM process in the district
- Aggregates and disaggregates the data for most meetings
- Works with building administration to develop data team capability, where appropriate
- Arranges meeting dates and agendas
- Develops the data sets and the data analysis protocols
- Facilitates school team meetings

- Reports the results of the FM process to the Curriculum and Professional Development Council (CPDC) and to the NHDOE.

School Achievement Teams

The school-based teams included principals, assistant principals, school data team members (2-3 teachers), SPED teachers, and the school reading teacher. The exact size of the school team was determined in conjunction with the principal and based on the specific situation in the school. For example, some schools chose to have larger teams to allow for broader input, to expose more teachers to the data systems and analysis protocols, or to increase teacher buy-in for the implementation of the impending action plans.

The Focused Monitoring Coordinator(s)

The Focused Monitoring Coordinators performed several functions. They performed much of the data analysis. They also developed specific reports and reporting formats that allows schools and teachers to more effectively and efficiently analyze data to identify achievement gaps in support of the two essential questions for the Focused Monitoring process.

Curriculum and Professional Development Council

The CPDC's membership includes:

- Dr. Althea Sheaff, Executive Director of Curriculum and Instruction (chair)
- Dr. Eric Schroeder, Director of Special Education
- Dr. Brian Cochrane, Director of Accountability and Assessment
- Kathleen Drolet, Curriculum Supervisor
- Robert Cioppa, Supervisor of ELL
- Marshall Derry, Director of CTE
- Michelle Papanicolau, Director of Adult Education
- Pat Burns: Director of Title I
- Scott Insinga, Acting Director of Athletics and Wellness
- Diane Vienneau, Peer Coach
- Paula Papanicolau, Peer Coach
- Jan Martin, Chief School Psychologist
- Rosalyn Berrocales, Parent

The CPDC oversees curriculum and professional development related activities and initiatives within the Nashua School District. Specifically, its charge is:

- To develop a Curriculum Management Plan that is submitted to the Board of Education for Board review and approval
- To advise in the coordination and continuity of curriculum planning and professional development in grades K-12
- To assist in providing for continuous and systematic evaluation of the curriculum, instructional materials, and assessments
- To encourage and seek out innovative and creative curriculum related projects in collaboration with Curriculum Supervisors

- To serve as a clearinghouse for new curriculum and professional development ideas in collaboration with the Curriculum Supervisors
- To assist in communication among staff members about matters of curriculum, instruction, assessment and professional development
- To function as an advisory council submitting recommendation to the Superintendent or designee for further consideration
- To render suggestions to the Superintendent or designee relative to all curriculum, instructional and assessment matters.

The CPDC also currently serves as the district monitoring group for the District in Need of Improvement (DINI) plan as well as the district Corrective Action Plan. Thus, the CPDC is the appropriate body to oversee and provide feedback to the Focused Monitoring process. Suggested actions resulting from the Focused Monitoring Process will be forwarded by the CPDC to the Superintendent or designee.

Technical Assistance

Technical assistance from the New Hampshire Department of Education was provided by Dr. Richard Ayers and Jane Bergeron-Beaulieu.

3. Focused Monitoring Activities

Focused Monitoring Overview

Focused Monitored, as used in the Nashua School District, refers to the systemic process of:

- Analyzing students' learning and academic success/achievement in various areas of the curriculum
- Analyzing students' learning and academic success/achievement both in the aggregate and in a variety of student subgroups
- Identifying potential causes of "student learning problems" and the identification of a "root cause" (or causes) of the student learning problem
- Investigating and prioritizing potential solutions to the student learning problem(s)
- Developing an action plan to implement changes that address the student learning problem
- Implementing the action and evaluating its success at improving students' learning and academic success in the targeted areas.

Root Cause

Root cause(s) is/are "the deepest underlying cause or causes that the school can control or impact that, if addressed, will cause a significant improvement in under-performing students on key student achievement indicators".

Focused Monitoring Question Sequence

1. What are some of the **key indicators** of student academic success at our school?
2. Based on these indicators, what are the school's **strengths and weaknesses** with respect to student achievement?
3. To what extent do **performance gaps** exist among racial/ethnic, gender, Special Education (SPED), Limited English Proficiency (LEP), and socioeconomic status (SES) groups in our school on these key indicators?
4. What are the potential root causes for the performance gaps?
5. Which root causes will we try to address as part of our building action plan for 2010-2011?

Role of Building Data Teams in Nashua's Focused Monitoring Process

The building data teams, augmented by additional school staff as necessary, play a critical role in the Focused Monitoring process. Supported by the external Focused Monitoring team members (Brian Cochrane, Eric Schroeder, Bill Pimley & Ron Boisvert), the data team and the school administration have joint responsibility for achievement of the Focused Monitoring goals. The primary tasks of the data team in Focused Monitoring are:

- Identifying appropriate data sources to investigate student achievement levels
- Analyzing student achievement data for the purposes of:
 - identifying areas of academic strength and weakness
 - identifying achievement gaps (especially between identified and non-identified student populations)

- identifying potential causes for achievement gaps
- Investigating potential achievement gap cause(s) to identify root cause(s)
- Identifying 2-3 actions items designed to address root cause(s) of achievement gap(s)
- Developing a detailed action plan to implement the action item
- Monitoring the implementation and success of the action plan, modifying where necessary to close achievement gap(s)

Data Analyses Conducted

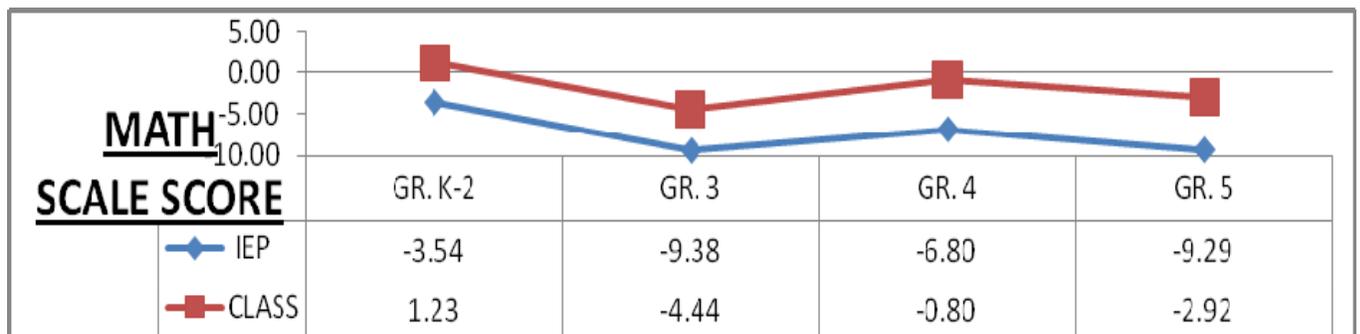

NECAP data analysis was conducted for each of the 12 elementary schools in reading and mathematics for each of the following categories:

- Aggregate school data
- Grade level data
- Gender
- Ethnicity
- Longitudinal data (school over time, grade level over time, and grade level cohorts over time)
- IEP status
- Individual student growth for students with IEPs by: (a) school, (b) school grade level and (c) instructional year
- LEP status
- SES status
- Strand data (school, grade level and IEP status).

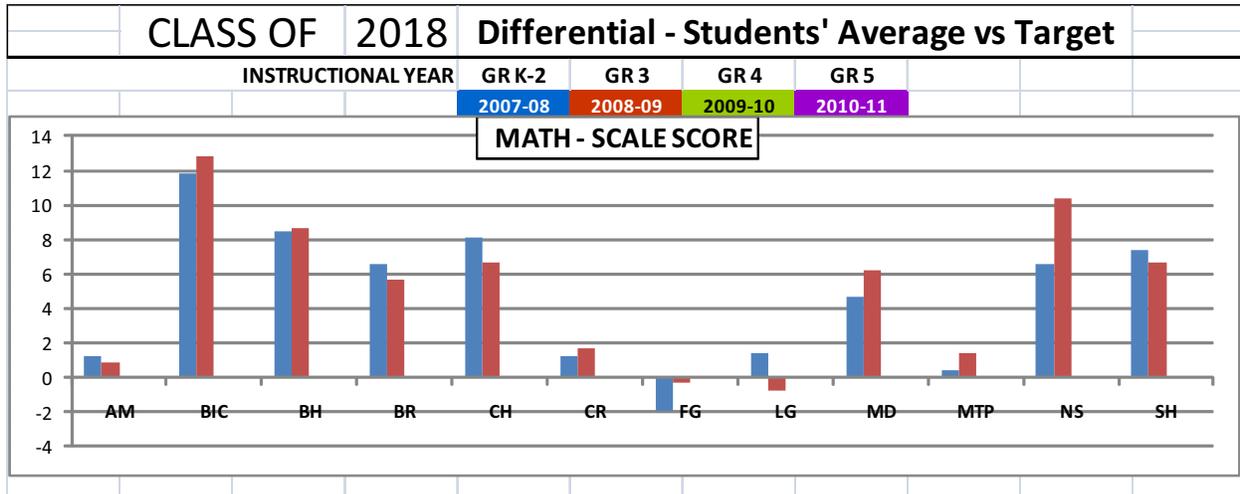

To view a sample school NECAP Data report, please see Appendix 1. To view a sample school SPED data report please see Appendix 2. To view a sample elementary Math benchmark assessment report, please see Appendix 3. To view a sample elementary Reading benchmark assessment report, please see Appendix 4.

Summary of Building/District Findings

1. School and school grade level increases and decreases in SPED student achievement in Reading and Math, as measured by NECAP results over time, showed great correspondence with the results for the general population.

- Grade level NECAP achievement showed a great deal of variability within individual schools. The instructional grade levels associated with significant and sustained growth varied considerably from school-to-school.

- Grade 6 testing year NECAP results with SPED students show an increase in the number and percentage of students who score a zero on the NECAP and also in the number of students who show significant achievement decreases (a loss of 10 or more points) in NECAP results year-to-year.
- Teacher turnover showed significantly more impact on instructional grade level Math achievement results than it did in Reading. School level differences in the scope of the impact were significant.
- Improvement in NECAP math achievement tended to occur in grade levels where:
 - Teacher collaboration was perceived to be relatively high
 - Fidelity to the Everyday Math program was relatively high
 - Teacher turnover was low
 - Teachers tended to make better use of student achievement data
 - Teachers tended to use the entire EDM program more consistently, including the student activities and differentiation resources.

These schools also tended to be non-Title I schools, with a stronger student population and typically more ability to provide math assistance at home.

4. IEP Review Summary

Special Education Compliance Component of NHDOE Focused Monitoring Process

NASHUA SCHOOL DISTRICT

NHDOE Focused Monitoring Compliance and IEP Review

Date of Report June 25, 2010

Introduction:

The compliance component of the NHDOE Focused Monitoring Process includes both an internal and external review of Special Education data directly linked to compliance with state and federal Special Education rules and regulations. Data gathered through the various compliance activities is reported back to the school's Achievement Team, as well as the NHDOE, Bureau of Special Education. This is for the purpose of informing both the district and the NHDOE of the status of the district's Special Education compliance with required special education processes. This includes, the review of data related to programming, progress monitoring of students with disabilities, and alignment of Special Education programming with the curriculum, instruction and assessment systems within the school district.

Data Collection Activities:

As part of the NHDOE Focused Monitoring Process a Special Education compliance review was conducted in the elementary and middle schools on January 26, 27, 2010 and February 17, 2010. Listed below is the data that was reviewed as part of the compliance review, all of which are summarized in this report.

- Review of randomly selected IEPs
- Review of LEA Focused Monitoring Compliance Application including:
 - Special Education Policy and Procedures
 - Special Education staff qualifications
 - Program descriptions
- Review of all district Special Education programming
- Review of Out of District Files
- When appropriate, review of student records for students with disabilities who are attending Charter Schools

- Review of parent feedback collected through the Focused Monitoring data collection activities
- Review of requests for approval of new programs, and/or changes to existing programs

SUMMARY OF FINDINGS:

IEP and Compliance Review: Conducted on January 26-27, 2010 (Elementary Schools) and February 16-17, 2010 (Middle Schools)

As part of the compliance component of Focused Monitoring, the NHDOE consultants and visiting team members worked in collaboration with the Nashua School District to conduct reviews of student IEPs, (elementary and middle school levels) The IEP Review Process has been designed by the NHDOE to assist teams in examining the IEP for educational benefit, as well as determine compliance with state and federal Special Education rules and regulations. The review is based on the fact that the IEP is the foundation of the Special Education process. Additionally, as part of the Focused Monitoring Process, a complete review of special education policy and procedure was conducted as well as and a random review of student records for those children placed outside of the district.

As required by the IEP review process, general and special educators in the Nashua Elementary and Middle Schools were provided with a collaborative opportunity to review 33 IEPs that were randomly selected to determine if the documents included the following information:

- Student’s present level of performance
- Measurable annual goals related to specific student needs
- Instructional strategies, interventions, and supports identified and implemented to support progress toward measurable goals
- Assessment (formative and summative) information gathered to develop annual goals and to measure progress toward annual goals
- Accommodations and/or modifications determined to support student access to the general curriculum instruction and assessment
- Evidence of progress toward key IEP goals and the documented evidence of student gains over a 3 year period
- Transition plans that have measurable postsecondary goals (for youth aged 16 and above)
- Evidence of required documentation for preschool programming (for children ages 3-5)

The intended outcome of the IEP Review Process is not only to ensure compliance, but to also develop a plan for improved communication and collaboration between general and special educators, parents and students in the development, implementation and monitoring of IEPs.

BELOW IS THE SUMMARY OF DISTRICT LEVEL FINDINGS THAT RESULTED FROM THE IEP REVIEW PROCESS CONDUCTED IN THE Nashua School District, Elementary and Middle Schools:

Building/District Summary of IEP Review Process

Total Number of IEPs Reviewed: 33

Number Preschool: 0, Preschool reviews will be conducted during the 2010-11 school year.

Number Elementary School: 24

Number Middle School: 9

Number High School, Age 16+: 0 **Number High School, Age below 16:** 0 High School IEPs will be reviewed during the 2010-11 school year.

Conclusions/Patterns Trends Identified Through IEP Review Process: (Elementary and Middle Schools)

How has this process informed future plans for improving the writing of student IEPs?

- Student profiles would benefit from more comprehensive descriptions of student performance and include data that is connected to the present levels of performance and the general education curriculum.
- There is a need to further support communication and collaboration between general and special educator within each of the schools, and across the district.
- In writing annual IEP goals, state and district assessment data could be utilized more fully to ensure that IEPs are aligned to the general education curriculum and that assessment tools used to monitor IEPs are those used by the district.
- Transition planning and communication between the elementary and middle schools could be strengthened.
- Student IEPs can be better developed through the use of multiple measures in determining present levels of performance.
- IEPs should be written to ensure that general education teachers are able to monitor progress in the general education setting.
- There is a need for professional development for all staff in the writing of IEPs that include well constructed Present Levels of Performance, measurable annual goals with clear

benchmarks or objectives that are aligned to the general curriculum and understandable to teachers, parents and students.

Describe how individual student performance information is conveyed from grade to grade/school to school:

- The sending and receiving teachers have informal conversations and share written communication.
- There is planned communication between sending receiving case managers.
- Whenever possible, representatives from the current team meet with the receiving team.
- Elementary students have the opportunity to visit the middle schools.
- There are informal processes in place where teachers work with one another.
- Transitions are not consistently documented and while there are reported successes in transitioning students, there would be a benefit to ensuring that processes are consistently used by all staff in all schools.

How will the district further explore the factors that have impacted poor scores for individual students on state assessments?

- Continue to ensure that appropriate accommodations are provided to students for test taking.
- Consider planning pre-conference with child/parent for students who are considered “high risk” in order to stress the importance of assessments and connections to improved learning.
- Consider administering assessments in smaller groups, in shorter time frames with improved proctoring from staff.
- Continue the use of data teams in each of the elementary schools focusing upon GLEs and essential learning aligned with NWEA and NECAPs.
- Consider setting school wide student achievement goals that are carefully monitored.
- Align IEPs and classroom instruction.
- Continue professional development for all staff in access to and analysis of data.

Strengths and suggestions identified related to IEP development/progress monitoring and services:

Strengths:

1. The staff are starting to use data to write IEPs and to monitor student progress.
2. There is a sense of collaboration between general and special educators.
3. Most all educators are taking an active role in IEP development and welcome in put and participation from families.
4. The culture and climate in the elementary schools is child centered.
5. The staff and administrators are skilled and take pride in their work and respect and support one another.
6. There is ample professional development made available to staff, and offerings are comprehensive, ongoing, and well integrated.
7. The use of the RTII Model (Response to Intervention and Instruction) is emerging.
8. The district provides access to technology for all staff and students.

Suggestions:

1. Provide additional professional development in writing comprehensive IEPs.
2. Continue to focus upon the RTII model with particular emphasis on mathematics with strong interventions for all students.
3. Provide direction and assistance to all staff and administration in better understanding the use of accommodations and modifications in both instruction and assessment.
4. Reference NECAP and NWEA results in IEPs as data points.
5. Develop a systemic approach for soliciting parent and student input for developing IEPs.

Findings of Non-Compliance Identified as a Result of the NHDOE Compliance and IEP Review Visit:

As a result of the 33 IEPs that were selected for the IEP Reviews the following Findings of Non-Compliance were identified:

ED 1109.01 Elements of IEP

CFR 300.320 IEP Goals, Objectives and Benchmarks

Annual goals were not measurable or consistently aligned to present levels of performance.

Additionally, it was noted that the newly adopted IEP document/template currently used by the district needs a comprehensive review to insure that the template is in full compliance with state and federal special education rules and regulations.

ED 1109. 06 Monitoring and Annual Evaluation of IEPs

Several of the teams conducting the IEP reviews in the elementary and middle schools noted that progress monitoring was not consistently documented, nor were there consistently developed processes to ensure that general educators are involved in monitoring the progress of students with disabilities. Additionally, it was noted that due to the new software system and report cards generated, students with significant disabilities are not able to be provided with the report cards that are utilized for the general education population.

ED 1104.01 Special Education Process

Based on the IEP reviews, along with compliance data provided by the NHDOE, Bureau of Special Education, the Nashua School District must refine the oversight and implementation of the special education process at the building level to ensure compliance in all areas.

Please Note: These Findings of Non-compliance will need to be addressed in a corrective action plan and met within one year of the date of the report; a template is located at the end of this summary.

District Wide Commendations:

- The availability and access to student data and the formation of data teams in each building is commended.
- The district provides comprehensive professional development opportunities.
- The RTII system of tiered support in the area of literacy continues to emerge and have positive impact upon student learning.
- The attention to strategically developing data teams and data profiles for each building is evident.
- There are hard working, dedicated and skilled staff and administration throughout the district.

- The conscientious attention to individual students is recognized.
- Staff is open to professional learning and participates in a variety of offerings provided by the school district.

LEA Focused Monitoring Compliance Application

As part of the Focused Monitoring data collection activities, the LEA Plan, to include Special Education procedures, was reviewed. In addition, personnel rosters were submitted to verify that staff providing services outlined in IEPs are qualified for the positions they hold. Also, program descriptions were reviewed and verified, along with follow up and review of any newly developed programs or changes to existing approved Special Education programs. As a result of the review of the compliance application, it became evident that the district needs to work to conduct a thorough review of the program information in NHSEIS, and work with the NHDOE Bureau of Special Education to ensure that all program information for the elementary and middle schools is accurately reflected.

Out of District File Review

Based on the random review of 6 student files for children with disabilities placed out of district, (elementary and middle school level), there were no Findings of Non-compliance identified. The out of district coordinator does an outstanding job of monitoring the special education process and monitoring the programs for students with disabilities who are placed out of district.

Students with Disabilities Attending Charter Schools:

The district reports that there are currently no students with disabilities attending a charter school.

Requests for Approval of New Programs and/or Changes to Existing Programs:

As part to the Focused Monitoring Compliance Component, the NHDOE reviews all requests for new programs in the district, and/or requests for changes to existing programs. As such, the NHDOE worked with the Nashua School District in the review of the request for approval of the addition of 2 new preschool classes, Nashua Early Education Programs (NEEP) located at Bicentennial and New Searles Schools. Based on the application and the visit to the programs it was determined that the preschool programs meet all compliance requirements and it will be suggested that the programs be granted full approval from the NHDOE, Bureau of Special Education.

Conclusions:

The Nashua School District's Focused Monitoring IEP Review for the elementary and middle schools found the special education staff and classroom teachers to be working hard to implement sound programming for students with disabilities. The district promotes a culture that allows individual buildings to explore innovative instructional and support strategies for all students and particularly students with disabilities. This was evident in nearly all school settings and is strategically based upon

the informed use of data on student performance that is generated in a logical and systemic fashion throughout the district. The district is committed to providing quality services to all students in the least restrictive environment and is conscientiously working to insure that all educational settings represent this district aim.

PLEASE NOTE: THIS SECTION WILL COMPLETED WITH THE ASSISTANCE OF THE NEW SPECIAL EDUCATION DIRECTOR AND WILL BE COMPLETED BY JULY 30, 2010

5. Action Plan: NASHUA SCHOOL DISTRICT 2010-2011 ACTION PLAN

MEASURABLE STUDENT LEARNING GOAL #1: Student elementary math achievement, as measured by the percentage of students scoring proficient or above on NECAP and district benchmark assessments, will improve on aggregate and within the SPED, ELL and low-SES subgroups.

OBJECTIVE #1: Develop, implement, and use the results of district End-of-Year (EOY) math assessments at grades 2-5 for program improvement purposes.

STRATEGIES/ ACTIVITIES	ESTIMATED RESOURCES Budget, Human Resources, Materials	PERSON(S) RESPONSIBLE Leader and Participants	TIMELINE Begin/End	MONITORING OF IMPLEMENTATION Evidence		EVALUATING RESULTS Evidence of Effectiveness	
				What & by whom	When	What & by whom	When
Develop & implement EOY benchmark math assessments to provide teachers and schools better and more frequent data to determine program effectiveness and Modify instruction	Salary for Focused Monitoring coordinator (grant funded), substitute coverage for teacher work groups (provided by schools)	Director of Assessment, Focused Monitoring Coordinator(s), and grade level teacher work groups.	March 2010- July 2010	Brian Cochrane for development and implementation of assessments, and Elementary school principals for use of data	Fall 2010	Brian Cochrane, Ron Boisvert and Bill Pimley reviewing school-based findings and recommendations	Fall 2010

OBJECTIVE #2: Development and implementation of the district mid-year math assessments at grades 2-5.

STRATEGIES/ ACTIVITIES	ESTIMATED RESOURCES Budget, Human Resources, Materials	PERSON(S) RESPONSIBLE Leader and Participants	TIMELINE Begin/End	MONITORING OF IMPLEMENTATION Evidence		EVALUATING RESULTS Evidence of Effectiveness	
				What & by whom	When	What & by whom	When
Develop & implement mid-year benchmark math assessments	Monitoring coordinator (grant funded), substitute coverage for teacher work groups (provided by schools)	Director of Assessment, Focused Monitoring Coordinator(s), math curriculum supervisor, and grade level teacher work groups.	Sept. 2010- January 2011	Production and use of assessments			
				Brian Cochrane for development and implementation of assessments, and Elementary school principals for use of data	Winter 2011	Brian Cochrane, Ron Boisvert and Bill Pimley reviewing school-based findings and recommendations; Elementary school principals for school- level work	June 2011

OBJECTIVE #3: Perform a self-study on existing K-6 math curriculum and instruction (Everyday Math) and make recommendations for strengthening math curriculum, instruction and support.

STRATEGIES/ ACTIVITIES	ESTIMATED RESOURCES Budget, Human Resources, Materials	PERSON(S) RESPONSIBLE Leader and Participants	TIMELINE Begin/End	MONITORING OF IMPLEMENTATION Evidence		EVALUATING RESULTS Evidence of Effectiveness	
				What & by whom	When	What & by whom	When
Everyday Math lesson mapping/analysis	Math curriculum supervisor, teacher teams (either school-based or district)	Math curriculum supervisor and elementary teacher teams	October-December 2010	Mapping reports and analyses will go to Dr. Althea Sheaff, Assistant Superintendent	December 2010	Effectiveness will be determined by the report's ability to inform district and school level action regarding math instruction and eventually math achievement. Dr. Althea Sheaff and Dr. Brian Cochrane responsible.	June 2011

Additional Action Plan Detail

1. Map/Analyze Everyday Math lessons based on the following criteria:

- The lesson addresses math skills and concepts at the Beginning (B), Developing (D) or Secure (S) level
- The lesson maps primarily below, at or above the relevant NH GLE strand
- The lesson's effectiveness based on past experience
- The lesson's associated math activities (based on EDM resources)
- The lesson's associated differentiation opportunities (based on EDM resources)
- Potential supplemental resources

MEASURABLE STUDENT LEARNING GOAL #2: Increase the effectiveness of testing accommodations procedures for grade 6 students during NECAP testing to give more valid achievement measures for all students.

OBJECTIVE #1: Develop and implement accommodations procedures that better meet the testing needs of middle school students. .

STRATEGIES/ ACTIVITIES	ESTIMATED RESOURCES Budget, Human Resources, Materials	PERSON(S) RESPONSIBLE Leader and Participants	TIMELINE Begin/End	MONITORING OF IMPLEMENTATION Evidence		EVALUATING RESULTS Evidence of Effectiveness

Compilation of Grade 5 student accommodations and forwarding them to the appropriate Middle School	None	Brian Cochrane, K-8 Principals	June-Oct. 2010	Brian Cochrane, spot testing of accommodations and review of testing schedules. Elementary school principals for sending of accommodations. Middle school principals for implementation of NECAP accommodations.	Sept.- Oct. 2010	Brian Cochrane to review SPED NECAP results in January 2011	Winter 2011

APPENDICES

Appendix 1: Sample School NECAP Data Report

This report was generated for all 12 Nashua School District Elementary schools as part of the data analysis. It examines student performance in Reading and Math in a variety of ways including aggregate data, data disaggregated by NCLB subgroups, disaggregation by grade level instructional year, and strand data.

Appendix 2: Sample School SPED Data Report

This report was generated for all 12 Nashua School District Elementary schools as part of the data analysis. It examines student growth in Reading and Math as measured by consecutive annual NECAP results for all SPED students for whom this data is available in the school. The first report includes all data for 2005-2009. The second and third reports represent the two most recent instructional year results and show the average annual growth as well as breaking student growth out by instructional grade level.

WRITING PROMPT - Responding to Literature

Writing a How-To Paragraph

Student Score = 3

BASIC

Rubic

Paragraph attempts to explain how to make "The Garbage Game" or how to write a letter.
The task may be unclear.
A step may be missing or unclear.
Words like first were needed to indicate order of steps.
Several errors may affect meaning.
