

Kindergarten PLAY-Based Learning

Teachers and Administrators

What is Play-Based Learning?

Self-Chosen

Enjoyable

Process Oriented

Children naturally learn through play by engaging in and making sense of their world. Play-based learning is self-chosen, enjoyable and process oriented. These opportunities are experiences that are child directed and teacher facilitated. In play-based learning, teachers take an active role as intentional planners, observers and guides. Play-based learning maintains the joy of free play while allowing children to connect authentically with content. When children co-construct their learning with their teachers and peers, they apply it to their own lives and make meaningful personal discoveries as they progress towards learning goals.

Benefits of Play-Based Learning

- Builds executive function skills, content knowledge and creative thinking.
- Enhances problem solving skills.
- Develops reading, vocabulary and writing skills.
- Builds counting, classifying, measurement and patterning skills.
- Grows prediction and observation skills.
- Offers the opportunity to test ideas and make modifications.
- Helps children learn about themselves and the world around them.
- Allows children to apply what they learn to new situations.
- Builds confidence, the ability to collaborate and to express their feelings.
- Produces opportunities to expand thinking and try new things.
- Motivates children to take “safe” risks.

Play-Based Learning in Kindergarten Law

In 2018, the state of New Hampshire amended RSA 193-E:2-a, the Substantive Educational Content of an Adequate Education law. The new section of the law states: “... Educators shall create a learning environment that facilitates high quality, **child-directed experiences** based upon early childhood **best teaching practices and play-based learning...**”

Kindergarten Play-Based Learning: Role of the Teacher

Intentional Planning

When planning activities, specifically think about what you want the children to learn, how will you set the stage, what conversations or vocabulary you can introduce, what teaching strategies will you use to foster and deepen the play and outcome you desire.

Creating Challenges

Think about how you can extend play by adding to it or by giving the children a challenge that will bolster the learning and play.

Setting the Environment

Do you intentionally plan your environment? Do you think about furniture arrangement, access to materials, displays and the schedule of the day? Does the environment reflect the learning happening in your room?

Helping Children Solve Problems

When challenges arise, ask probing questions, model and help guide children to problem solving solutions.

Asking Guiding Questions

Prompt children to think and talk about their ideas. Asking guiding questions extends children's thinking while providing open-ended support.

Giving Specific Feedback

Offer children positive, specific feedback in a timely manner. Focus on one or two comments at a time. Asking for feedback from children in return increases their sense of importance and encourages critical thinking.

Encouraging Effort & Persistence

Congratulate children's efforts throughout the process and not just for a completed project.

Observing, Documenting & Assessing

Use ongoing observations and documentation to help assess children's growth and development.

Setting the Stage for PLAY-Based Learning

Kindergarten Environments

“The classroom is also a teacher,
what do you want your classroom to say?”

Room Arrangement & Materials

The environment sets the stage for the learning that will occur. A well designed physical space has different areas for children to play in. All of the usable space should be fluid and reflect the children’s needs. The room arrangement and materials should promote discovery, exploration and encourage progress towards learning goals.

Materials & Accessibility

Materials are an important part of the environment and should be intentional and accessible to the children every day. In a play-based learning classroom, consider open ended learning materials such as loose parts, wooden blocks, dramatic play accessories and a sensory table. These types of materials allow children to create their own meaning in imaginative ways.

Scheduling

Your schedule is a part of the environment. Children need plenty of time to engage in child-led experiences and deep play. Guided play-based learning should be woven into your schedule throughout the day. The longer children have to engage, explore, reflect and construct, the more learning occurs.

“Play is not a serious break from learning ,
play is learning.” - Fred Rogers

Environment Reflects Learning

The environment should reflect the learning that takes place in the classroom. Children should see their work displayed and be able to use visual resources to enhance their experience. Displays can consist of student work, photographs, pictures and anecdotal notes with learning goals. This type of environment can be a visual documentation of the learning that is taking place in your classroom.

Frequently Asked Questions about Play-Based Learning

For Families and Guardians

Is this going to affect my child's readiness for first grade?

Yes. Children that learn in a play-based environment have strong collaboration, communication and critical thinking skills as well as meaningful connection to content, creative innovation and confidence. Play-based learning helps children develop social skills, language and numeracy skills. Children who learn through play take initiative, have focused attention, and are motivated to learn.

Will my child be academically challenged?

Yes. Children in play-based programs score better on measures of self-regulation, cognitive flexibility, and working memory (Diamond et al. 2007). Self-regulation and impulse control is predictive of later academic success. Engaging in play with teachers and peers helps children develop holistically through social-emotional learning, developing confidence and motivation, and practicing cognitive skills.

Are they just playing all day?

No, even in a play-based learning environment there is a place for teacher led instruction. However, children benefit from extended time within the day that is dedicated solely to guided play. This is a time when they take the lead and direct their own experiences. Children practice and reinforce their learning in multiple areas during play. Play gives them a space and a time for learning that cannot be achieved through teacher created activities. For example, in playing restaurant, children write and draw menus, set prices, take orders, and sort food groups. Play provides rich learning opportunities and leads to children's success and self-esteem.

What is my child learning?

Children experience rich and meaningful learning when they play. Through play, children develop critical thinking and perspective taking. Play allows children to explore mathematical concepts such as quantity and measurement, build language skills such as speaking and listening, and practice inquiry and the scientific method. Children develop creative innovation and confidence as they play.

Frequently Asked Questions about Play-Based Learning

For Families and Guardians

What is the teacher's role in a guided play-based learning kindergarten?

In a play-based kindergarten, the teacher's role is to be a facilitator of play. Teachers set the environment for learning, they ask guiding questions, set up challenges, offer vocabulary and give feedback. As children play, teachers are making observations and documenting what they are seeing so they can set the stage for learning the next day. They use these observations for authentic assessment.

How can I support my child's play-based learning at home?

To support your child's learning at home, play with your child, ask questions, experiment and encourage curiosity by sharing wonder in their exploration. Respond positively to your child's interests. "Playing with your child helps to keep them engaged in the type of play where learning occurs. Your interest, questions and comments as you play along side will help your child use materials productively and the two of you will have lots of fun together."

Gronlund, G. (n.d.). How to Support Children's Approaches to Learning? Play with Them! Retrieved from <https://www.naeyc.org/our-work/families/support-learning-with-play>

Family & Guardian Resource:

[NAEYC position statement](#) on Developmentally Appropriate Practice

"Play is an important vehicle for developing self-regulation as well as for promoting language, cognition, and social competence. [Play] gives [children] opportunities to develop physical competence and enjoyment of the outdoors, understand and make sense of their world, interact with others, express and control emotions, develop their symbolic and problem-solving abilities, and practice emerging skills." (NAEYC 2009, 14)

Kindergarten PLAY-BASED Learning

Types of Play: There Is a Difference

Guided Play

Guided play is the foundation for play-based learning. The teacher sets the stage by creating an environment that promotes exploration and discovery. Many open-ended materials are provided to support the learning goals and objectives for each day. Children direct how materials are used. Teachers guide and support children by intentionally planning invitations for play and asking open-ended questions to promote engagement and discovery along with creative innovation, critical thinking, collaboration, connection to content and confidence.

Be intentional about the goals you want to achieve, environment you create, the materials you supply, the conversations you have and the observations you document.

Teacher Constructed Playful Learning

All learning in Kindergarten should be playful. The difference between teacher constructed playful learning and guided play is who initiates the experience. In teacher constructed playful learning experiences, the teacher takes the lead and gives instructions with set expectations. In guided play, children take the lead and choose how they will use the provided space and materials.

Free Play

Free Play is another form of play. This type of play is when the children have all the control and choose all the materials and decide how they want to use them. Free play differs from guided play in that the teacher is not creating activities with specific learning goals in mind. For example, when the children go outside to play for recess, they have autonomy to choose how to spend their time.

PLAY-BASED Learning

Open-Ended Questions

Open-ended questions are questions that can be answered in different ways. Asking children open-ended questions encourages language development, affirms children's ideas, and encourages their creative thinking. The way we interact with children as they play helps them make connections. The questions we ask allow us to collaborate with children as they make meaning and learn through play. Open-ended questions build self-confidence because a wide range of answers are expected and valued. They enable children to think for themselves and contribute to their own learning.

Listening to children's responses is just as important as asking questions. Show children that you are interested by waiting for them to form their answers and to fully respond without interruption.

Knowledge Questions

What happened when/before/after...?
How did you do/make this...?
Describe what you know about...
Tell me about ...
What did you use to make it?

Comprehension Questions

Why do you think...?
What's the difference between ...?
Can you give me an example of ...?
How do you know that...?
What happened first, second, third.?

Application Questions

How you would make/build...?
How can we organize these?
How can we/you find out?
What could you do with it? What else?
How can we solve this problem?

Analysis Questions

Why is this important?
In what ways are these different/similar?
How does this work?
Is there anything that you would change?
Why do you think...?

Evaluation Questions

What other ideas do you have to add?
Let's think of a different ending to the story.
What else could you do/use?
How will you prepare for...?
What could we have done instead?

Creating Questions

What changes would you make to...?
Why did you choose those materials?
How could we make this stronger/better?
How will you make a new...?
How are you planning to do that?
