

3-2-1 Strategy

In this cooperative reading strategy, the adult learners interact with the text in three distinct ways. First, learners summarize important points from the reading. Second, learners share most interesting information they gained from the assigned reading. Lastly, the learners ask questions to seek clarification around the text.

How does the 3-2-1 strategy work?

3 things the learner found out. Learners summarize and cite three different details that they learned from the reading.

2 things they found interesting. Learners summarize and cite two different details that they found interesting from the reading.

1 question they still have. Learners write one question they still have from the reading.
